

Wholesale Distribution / Light Manufacturing

By BIS Computer Solutions, Inc.

What is Wholesale Distribution / Light Manufacturing?

A Little Background

The BIS Wholesale Distribution System (DIST) application is specifically designed for high volume Wholesale Distributors. It saves time in operations using software capabilities specifically tailored to wholesale distribution.

- The DIST Customer Service application is designed specifically to improve customer service operations immediately by allowing staff to maneuver from one area to another with minimal keystrokes.
- Customers have access to all the critical data for management to run the business - sales, profit margins, backlog, inventory status, high movers / dead stock, cash position and movement, and more.
- Mobile BIS has enhanced the product with many modern distribution tools as industry experts. Specific examples include non-stocked merchandise, bar coding, automated cycle counting, vendor and customer performance reporting, automated faxing, EDI, management reporting, and more.

Functions and Features

Mobile BIS DIST software provides superior warehouse automation tools including use of handhelds for receiving, putaways, picking, shipping, and physical counting.

DIST operates all of the business functions of a multi-location wholesale distributor / light manufacturer, including Order Processing, Inventory Control, Purchasing, and all Accounting functions through to the Financial Statements. Point of Sale, kitting and light manufacturing is included. Strong Replenishment system based on multiple forecasting methodologies with automatic purchase recommendations.

It operates via client/server as well as via browser over the Internet.

It provides access to data via wireless notebooks, tablet computers and PDAs.

It utilizes latest Oracle database and handheld technology to accomplish day to day tasks.

This highly integrated product is targeted to small to medium sized firms who want the type of functionality offered with top of the line products but at an affordable price.

The customer service module allows for two way conversations with customers and have all the information they need at their fingertips, including previous orders and how much was paid for the ordered items, outstanding invoices, and so much more. Historical data is stored for many years, using the Oracle database.

- Multi location and multi-company
- Inventory lots or serialization
- Merchandise In-Transit is monitored separately for foreign products with long shipping times, with various add-on costs separately tracked to determine the full landed cost
- Sales Forecasting and PO recommendations
