Revised Sept 2019.

## Cloud-based products

The latest application development environment and database releases provide benefits of cloud computing and on-premise applications.

## Medical Waste Pickup (optional)

The application now has a full-featured Medical Waste Pickup module to assist in pickups from your vets! While this works in a similar manner as the pick-up process of deceased pets, the rules and regulations behind this application are somewhat more stringent.

## Real Time Cremation Module (optional)

Cremation orders are displayed throughout the facility to show the status of each pet and highlights any orders that are behind schedule or require additional services. This snapshot of each pet at each station allows tracking of production and status for additional efficiency, updating changes as each pet moves through the process.

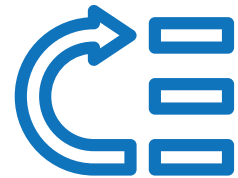

## Crematory Chain of Custody (CCC Module)

Follow each pet through the cremation process with chain of custody processing. Allows you to follow production and be informed of critical details pertaining to each pet. Mobile devices allow you to process each pet with efficiency.

## Priority or Special Treatment of Pets

These orders are flagged for those pick-ups that need to be moved to the front of the processing line. Color coding highlights such orders on the real-time cremation module monitors.

## Mobile Devices

Broken screens and expensive repairs add up very quickly. The Unitech Hardware Devices are built to withstand the wear and tear associated with any enterprise, all while maintaining the stylish look of consumer-grade smartphones.

## International Language Support

Newly available multi-language support in PCS and PBS allows you to use any international language and customize fields and reports to represent any desired native language. Language translations are available throughout the entire application. This module allows you to configure PCS to your native language.
